RELEASE NOTES .................................................................................................................... 4
Introduction
This document applies to the security patch created for:
  - FLIR FB-Series-O

Release Notes
This Firmware Patch applies some modifications to address the following five cybersecurity issues:

1.- Information disclosure: Some internal files could be accessed without authentication.
2.- Stream disclosure: Video snapshot URL did not require authentication.
3.- Unauthenticated remote code execution.
4.- Authenticated remote code execution.
5.- Remote access hard-coded credentials: SSH security has been improved.
