1 Introduction

The Horizon Setup Wizard appears at the first launch of the Horizon NVR, to assist the user in quickly and effectively configuring the system. This *Quick Configuration Guide* is a step-by-step description of the process.
2 Initial Setup Wizard

The first time the Horizon NVR is powered up, the user must enter the default user name and password at the Windows login screen.

These credentials can be found in the printed Quick Installation Guide found in product box.

Upon first login, the user will be prompted to choose a new Windows Password.

Once the password has been entered, the system automatically runs the Initial Setup Wizard. The user completes all the Wizard steps, after which the system opens the Horizon Admin Center and the system setup can be continued.

**Note:** All steps in the Initial Setup Wizard are mandatory. The Horizon Admin Center will launch only after all steps have been completed.
3 Wizard Welcome Screen

On the Welcome screen, click **Next**.

*Figure 1: Wizard Welcome screen*
4 Time Setup

Set the system date and time.

![Time Setup](image)

### Parameter | Notes
--- | ---
Date, Time | Set the date and time according to current time now in your region.
Time Zone | Use the dropdown to select your Time Zone.
Daylight Savings Time | Check this box if you are in a location that uses DST.

When finished, click **Next**.
5 Network Selection

The Network Selection screen provides two alternatives:

Default Configuration - Use Video NIC for segregated camera network

Horizon is equipped with two NICs (Network Interface Cards) called ‘Video’ and ‘Corporate’. The default configuration uses the Video NIC to provide a segregated network to which cameras and workstations are attached. The Corporate NIC is used to connect the Horizon Server to the user’s regular IT network. This also allows Horizon workstations to reside on the corporate network.

![Network Diagram](image)

To use this setup, leave the selection of the Video NIC unchanged, click Next, and proceed to the Network Setup step.

This configuration has the advantages that:

- DHCP can be used for automatic assignment of addresses on the segregated network to assist with camera auto-discovery, without this affecting addresses of components on the corporate IT network. This gives a ‘plug and play’ capability for attaching cameras to the system.
- All (or at least most) of the high amount of video traffic generated by the cameras and workstations is kept separate from the corporate IT network.
- It is much more difficult for the video signals to be accessed or interfered with from outside.

Notes:
1. When using DHCP to assign addresses to your cameras, you should only power-on the cameras AFTER this setup Wizard is complete and the Horizon software is running.
2. Cameras connected to the corporate network may be used, but these must be set up manually – Horizon’s auto-discovery will not find them.
Alternative Configuration – Camera and Workstation settings done through Windows Network and Sharing Center

This setting may be used when the user wishes to set up cameras (and workstations) on the existing corporate network, without using the system’s auto-addressing and plug-and-play facilities.

To use this setup, select the Corporate option in the Network Selection screen, and click Next.

No Network Setup screen is provided. Proceed to the Video Standards step.

Note: The Horizon Server Hostname is already set. The Horizon license is tied to the hostname, and therefore this hostname must not be changed, as this would require a new license.
6 Network Setup

Video Network Setup

If VIDEO was selected in the Network Selection step, the Network Setup screen is displayed.

1. DHCP

The Horizon Server can act as its own DHCP server. By selecting YES, the Horizon will automatically set IP addresses for cameras and client workstations that are connected to the VIDEO network.

**Notes:**

i. The DHCP Server is configured to act ONLY on the VIDEO NIC.

ii. If DHCP is chosen, it is recommended to have all cameras attached to the switch and powered up prior to completing the Wizard.

DHCP can change network addresses of devices on the network. If DHCP is in use, the user must take care that the Video network remains isolated from the user’s Corporate network.

2. Setting up Network IP Address

The Video NIC of the Horizon Server is already set with a default IP address 192.168.50.10.

If you want to change it, enter the IP address and Subnet mask in the corresponding fields.

**Note:** If the Horizon server is being launched in a staging environment, please set up the IP address and Subnet mask that will be used at the customer site.
Corporate Network Setup

If CORPORATE was selected in the Network Selection step, no Network Setup screen is provided. The IP setup must be performed through Windows Network and Sharing Center.

Note: The Horizon Server Hostname is already set. The Horizon License is tied to the hostname, and therefore the hostname must not be changed.

When finished, click Next.
7 Video Standards Setup

Select the video standard used in your region: **NTSC** or **PAL**.
When finished, click **Next**.
8 Recording Mode Setup

The chosen Recording Mode will determine how the connected cameras are set to record when the Wizard is complete.

![Recording Mode screen](image)

Note: These settings can be changed at any time for each individual camera through the Horizon Admin Center.

**Always Recording**

Cameras will record 24/7, using the video settings assigned to the camera, either by default or as modified individually by the user.

**Motion Detection**

Cameras will only record when they detect motion. The default motion recording settings are 30 seconds pre- and post-motion. This can be changed later on through the Horizon Admin Center.

Note: After launching the Horizon Admin Center, it is recommended that the user checks that the motion zone and motion settings (Sensitivity and Threshold), which the system set automatically, are suitable.

When finished, click Next.
9 Complete Setup Wizard

After completing all the Wizard steps, Wizard displays the Setup Complete screen.

Setup Complete

At this point, the user still has the option to return to any of the previous screens if any changes are required by using the Back button.

This screen also displays instructions for downloading the client software, if required.

Once all of the settings have been selected, click Finish.

The Setup Wizard will apply all the chosen parameters.

This process can take 2-3 minutes to complete.
10 Launch

When the system is ready, the Launch Completed message is shown.

![Launch Complete](image)

Click Launch Admin Center to continue with the setup configuration.
11 Admin Center

The Horizon Admin Center allows the user to configure all aspects of the system.

To launch the Horizon Admin Center (if not already launched from the wizard), click on the application shortcut icon on the Desktop.

11.1 Login Screen

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>User name</td>
<td>‘admin’ is the user name for the default System Administrator user</td>
</tr>
<tr>
<td>Password</td>
<td>For first-time use, no password is defined. It is highly recommended to set a password from the Users page after login.</td>
</tr>
<tr>
<td>Server IP / Hostname</td>
<td>Enter the Server IP address as set in the Initial Setup Wizard. If you did not change the IP address, the default is 192.168.50.10 or enter localhost.</td>
</tr>
</tbody>
</table>

When the user’s credentials have been accepted, the Horizon Admin Center launches and displays the Home screen.

11.2 First Launch

When the user first logs into Horizon Admin Center for the first time after completing the Wizard, the system launches a screen with all of the current system information.
This shows the user how many cameras have been discovered during the wizard setup, the recording status of those cameras, the storage allocation and some default system information.

![First Launch screen](image)

**Figure 13: First Launch screen**

### 11.3 Home Screen

The **Home Screen** automatically displays when the Horizon Admin Center launches. The user can navigate from the Home screen to any desired page and then return to it by clicking the Home button on the sidebar.

![Home Screen](image)

**Figure 14: Home Screen**
11.4 Admin Center Screen Layout

![Admin Screen Layout](image)

The Horizon Admin Center layout is divided roughly into 3 sections, the Sidebar, the Item list and the Settings page.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Sidebar</td>
<td>Home, System, Cameras, Users, Rules and Alarms - The Admin Center pages are grouped into categories. Clicking any of these in the sidebar will place a list of items associated with that category into the item list.</td>
</tr>
<tr>
<td>2. Item List</td>
<td>For any selected category in the Sidebar, the available items are listed. The required item can be selected and its name is then highlighted.</td>
</tr>
<tr>
<td>3. Settings Page</td>
<td>The layout of the settings page varies according to the selection made in the item list.</td>
</tr>
<tr>
<td>4. Help Button</td>
<td>The system has an extensive context-sensitive Help function. In any screen, clicking the ‘Help’ button opens a page of information about that screen, with specific information such as explanations about icons used, how to add, edit or delete entries, default values, cautions and notes where required</td>
</tr>
</tbody>
</table>

Users can return to the Admin Center at any stage and update the initial configuration as necessary.

As noted, extensive Help system is embedded within the application. Additionally, you can always access the DVTEL website to download and watch the various tutorials explaining about the Horizon product.
