The FLIR Quasar™ Quad Sensor Camera is designed to address any application that requires full coverage of a wide area surveillance, with either a 180° or 360° degree field of view. Thanks to its patent-pending, one-step conversion process, the camera features a single form factor that is field-configurable to either 180° or 360° mode. The Quad Sensor capability completes FLIR’s offering of full, wide-area coverage typically required for city surveillance deployments, critical infrastructure, airports and any other high-profile security applications.
