CHANGE DESCRIPTION:

The protective glass windows used with color cameras are being changed to a new material. The new material is Schott B270 and has anti-reflective coating on one side. The specification of the glass window will not change. The IR cutoff wavelength will remain at 650nm. For more information regarding the transmittance properties of the new glass window, please refer to the supplementary information section at the end of the document.

This filter change is considered to be a minor revision with no impact on CE or FCC emissions compliance, no impact on Electro Magnetic Compatibility (EMC).
