THERMAL VISION
FOR FIRST RESPONDERS &
COMMERCIAL VESSELS
THE POWER OF THERMAL IMAGING

FLIR Maritime thermal imaging systems give you the power to see clearly in total darkness, haze, glare and smoke. FLIR thermal technology is used by thousands of military, first responder, and commercial professionals every day for navigation, collision avoidance, threat detection, surveillance, and search and rescue missions.

Thermal cameras sense heat, not light. All objects in our world emit thermal radiation at wavelengths beyond the capability of our eyes. Even ice cubes emit energy. Thermal cameras reveal subtle temperature differences in a video display that anyone can understand, with no training required.

Our eyes rely on light and color contrast to see and resolve objects. Other vessels and obstructions are hard to see in the dark.

Vessels, human activity, and stationary objects show up clearly in the complete darkness, glare, smoke, and haze when viewed in thermal.
From the smallest patrol boats to the largest ocean-going vessels, FLIR offers maritime camera solutions that are rugged, reliable, and simple to use.

CONTENTS

5  Surveillance and Search & Rescue
6  Security: Short and Long-Range
9  Thermal vs. Low-Cost Night Vision
10 Daylight and Low Light Visible Cameras for Surveillance and Threat Detection Applications
26 M232 Low Cost Pan/Tilt Thermal for Close-Range Applications
27 MD324/MD325 Stationary Thermal for Navigation and Onboard Surveillance
28 M300 High-Performance Thermal Camera
30 M400/M400XR Long-Range High-Performance Multi-Sensor System
32 M500 Maximum-Performance Multi-Sensor System
34 FLIR Handheld Thermal Scopes
**TRAFFIC**

FLIR cameras allow you to see traffic in total darkness even if they are running without lights. This helps you to avoid collisions, identify suspect vessels, and see onboard activity.

**MARKERS**

Thermal helps you to see the shapes of buoys and navigation aids. Cameras with color Thermal Vision offer enhanced identification by bringing color characteristics into the live thermal image.

**CLEARCRUISE™ OBJECT DETECTION**

In addition to the power of thermal vision many FLIR maritime cameras feature ClearCruise™ Object Detection technology for recognizing and highlighting non-water objects like boats, buoys, or floating debris.
SURVEILLANCE
SEARCH & RESCUE

Nighttime decision-making is a challenge for all first responders. A long-range, stabilized FLIR thermal camera system can help you observe suspicious activity or react quickly to emergency situations.

COVERT SURVEILLANCE
Airborne and land-based law enforcement agencies use thermal cameras as force multipliers. FLIR maritime thermal cameras offer the same covert advantage on the water.

ENFORCEMENT OPERATIONS
FLIR cameras give you situational information that other low light technologies can’t capture. Onboard recording and live streaming capabilities let command centres remotely monitor suspicious activity and gather video evidence.

SEARCH & RESCUE, MAN OVERBOARD
FLIR thermal cameras are powerful tools for SAR and excel in the maritime environment. Cool, uniform scene dynamics make warm objects—such a person—stand out in the scene.
SECURITY: SHORT-AND LONG-RANGE

Thermal cameras allow professional mariners and first responders to monitor the safety of their crews in total darkness, as well as evaluate security threats around them. It’s virtually impossible to hide from a thermal imager.

THREAT DETECTION
Long-range thermal cameras give you more time to react by identifying suspicious or threatening behavior. Conduct surveillance from a safe standoff distance, then move in when the time is right.

OPERATIONS & ONBOARD SECURITY
FLIR cameras allow you to observe activity on deck, regardless of lighting conditions.

PATROL & PORT SECURITY
Thermal cameras allow you to covertly observe activity at long ranges. This is extremely useful for law enforcement and security applications. Network-enabled systems can also be managed remotely, allowing agents to view live video at remote stations or command centers.
SPECIAL THERMAL IMAGING APPLICATIONS

Because thermal imaging cameras display differences in temperature within a scene, they are powerful tools for evaluating environmental conditions, seeing through smoke, and even detecting icebergs.

OIL SPILL MANAGEMENT
Thermal cameras can reveal oil slicks on water. Water reflects more thermal energy than oil, so the cold night sky reflects off the water while oil reflects less and appears warmer.

FIREFIGHTING
Smoke blocks visible light, but thermal energy passes through. Thermal imaging allows you to see the location of a fire and any onboard activity in low-visibility smoke conditions.

ICEBERG AVOIDANCE
All objects give off varying amounts of thermal energy, even ice. By assigning color to objects below a specified temperature, FLIR cameras can help reveal icebergs.
ENHANCED VISIBILITY IN CHALLENGING ENVIRONMENTS

GLARE
Daytime solar glare and nighttime urban lighting pose challenges for response boat pilots, especially when navigating busy areas at high speeds. Thermal cameras are not affected by light, so the image from a thermal camera will be consistent regardless of glare conditions.

FOG
Thermal cameras will offer some level of improved visibility through fog. While environmental conditions will affect the visible distance and thermal image quality, cooled mid-wave thermal cameras deliver improved performance for imaging through fog.

VISIBLE THROUGH FOG
LONG-WAVE
MID-WAVE
THERMAL VS. LOW-COST NIGHT VISION

The maritime environment presents some of the most difficult imaging conditions possible. Conventional low-light or image intensified cameras (green night vision scopes) rely on small amounts of light to produce an image. In many cases, the maritime environment is cluttered with bright lights on the shoreline, which presents a challenging scene for image intensifiers.

Bright lights in the distance can cause a conventional night vision scope to bloom, making it hard to see targets of interest. Conversely, the maritime environment is complimentary to thermal imaging, since you are looking for a warm target against a cool, uniform scene.

Humans and engines can’t hide their heat. Because of this, FLIR thermal cameras outperform low-cost night vision systems for long-range detection and search and rescue.

CAN YOU SPOT THE KAYAKER?
1. Your eyes can’t adjust fast enough to deal with a dark foreground and bright lights on the horizon.
2. Like the fog set, we need to scale these appropriately so the target of interest, and other major landmarks in the scenes, are in the same positions. Otherwise it’s impossible to compare them and they lose credibility. Night vision scopes struggle when even the smallest amounts of bright light enter the scene. Notice how the distant lights bloom, destroying the contrast in the foreground.
3. FLIR thermal cameras do not rely on visible light. The kayaker’s body heat gives away his position.
DAYLIGHT AND LOW-LIGHT VISIBLE CAMERAS FOR SURVEILLANCE AND THREAT DETECTION APPLICATIONS

FLIR stabilized maritime systems configured with high-performance daylight cameras provide incredible standoff range that will extend your threat detection, security, and surveillance abilities with up to 360x combined optical and digital zoom.

These powerful HD visible cameras can outperform stabilized binoculars, and video can be recorded for evidentiary purposes. With 0.35 lux sensitivity these HD visible cameras greatly enhance your ability to positively identify vessels or suspects in low light conditions.
WIDE-ANGLE VIEW FROM M400/M500 HD DAYLIGHT CAMERA

ZOOM VIEW FROM M400/M500 HD DAYLIGHT CAMERA

HIGH-PERFORMANCE M300/M400/M500 LOWLIGHT MODE
FEATURES, INTEGRATIONS, AND OPERATIONAL REQUIREMENTS TO CONSIDER

STABILIZATION
FLIR offers both fixed and stabilized pan/tilt camera systems. Stabilization compensates for vessel pitch movement and is an important requirement in most commercial and first responder applications. There are some applications, however, where a fixed, short-range camera pointed at an operations area of a deck won’t require stabilization.

M300, M400, and M500 systems also offer horizontal pan stabilization which allows the camera to automatically keep a scene in view while the boat maneuvers freely.

REMOTE CONTROL AND MFD INTEGRATION
FLIR maritime thermal cameras can be controlled through a joystick control unit (JCU), along with a dedicated marine monitor display. Additional joystick controls units and monitors can be used for viewing at remote locations. FLIR maritime cameras also integrate with Furuno, Garmin, Simrad, and Raymarine multifunction displays (MFDs).

Integration with popular multifunction displays from Raymarine, Simrad, Garmin, and Furuno
**NETWORKING AND VIDEO CONTROL**

Most older multifunction displays accept analog video, and the new systems are migrating towards IP video with network-enabled control. FLIR offers future-proof solutions to ensure your system will support your marine electronics suite for years to come.
ADVANCED FEATURES FOR COMMERCIAL MARINERS AND FIRST RESPONDERS

RADAR INTEGRATION
Integrating a FLIR maritime camera to a compatible radar system can significantly reduce operator workload. Depending on the level of system integration, captains can select an AIS or MARPA target of interest on a touchscreen MFD and slew the FLIR camera to the target’s location. This process, called slew-to-cue, enables the cameras to automatically track a target. Slew-to-cue can greatly benefit man overboard efforts, and help captains locate markers or targets in the distance. Once only available for sophisticated military systems, slew-to-cue target tracking can work seamlessly between visible and thermal cameras for systems with dual payloads. The capabilities and level of slew-to-cue integration vary by marine electronics manufacturer.

VIDEO AUTO TRACKING
FLIR M400XR and M500 models are equipped with a video tracker feature. Video tracking allows the camera to follow a target of interest automatically without continuous input from the operator. The camera will automatically track the target if the target remains in an unobstructed line of sight. The video tracker works seamlessly between the visible and thermal cameras, allowing you to switch between systems and adjust zoom settings.

Enable your camera to track radar targets automatically
Autotracking is useful for reducing workload, as it allows operators to concentrate on other duties while the camera stays on target
INTERNET NETWORK REMOTE CONTROL

The advanced M400 and M500 can be accessed and controlled remotely, enabling remote security monitoring, interagency command and control, remote surveillance and video gathering, and system diagnostics.

Network-enabled systems allow you to remotely control the FLIR system from a command center.

Command and control, information sharing, remote video recording, extended surveillance, and agency interoperability all benefit from a network connected FLIR system.
FLIR MARITIME THERMAL CAMERAS AND MISSION PROFILES

FLIR offers a wide range of thermal camera systems for many different missions and tasks.

When choosing a thermal camera for your application, there are three questions to ask.

1. How far do you need to see?
2. Do you need a visible camera for daytime operations?
3. Do you need a stabilized system?
For detailed product specifications, see pages 30 to 36.
UNDERSTANDING RANGE PERFORMANCE AND OPERATIONAL REQUIREMENTS

One of the first questions to answer while comparing camera systems is how far you will need to see to identify vessels, objects, or activity of interest. Low-cost FLIR cameras are fixed field of view systems optimized for navigation and close-range operations. High-performance systems offer optical zoom lenses that can detect a small 30’ vessel at beyond 5 nm.
Thermal camera sensors are low resolution compared to the megapixel visible cameras in smartphones. The commercially available systems commonly have between 320 × 240 or 640 × 480 thermal resolution. While this seems low, a 640 × 480 FLIR camera with a powerful optical zoom lens can satisfy most commercial and first responder missions.

For detailed product specifications, see pages 35 to 41
DISTANCE, RECOGNITION, AND CLASSIFICATION

The distance that you will be able to detect and recognize a target depends on various camera and atmospheric factors. Most manufacturers use a mathematical model to establish range performance claims. As the leaders in maritime imaging, FLIR provides actual test results and validates range performance in real life conditions. Video of these results are available online at flir.com/marine.

There are three industry-standard measurements used to present the range performance of a thermal imaging system: detection, recognition, and identification. Detecting a target simply means you can see a hot spot on the monitor, even if it’s just one pixel. Recognizing a target means you can verify it as another vessel, as opposed to an island. Recognition can be possible with as few as five or six pixels.

Since the identity of a human cannot be reliably determined with thermal cameras, FLIR uses “classification of human activity,” rather than “identification.”

Classifying human activity is a more meaningful benchmark, given that in most first responder missions, officers are primarily interested in confirming that people are onboard, determining how many there are, and understanding what they are doing.

The graphics on the following pages illustrate the ranges at which the following FLIR cameras can realistically provide detection, recognition, and classification of a 30ft. vessel under ideal and poor conditions.

Detection means you can see something on the monitor. It might only represent one or two pixels on the camera, but it shows up just the same.

Recognizing a target means you can verify it as another vessel, as opposed to an island. FLIR uses a 30’ outboard boat as a benchmark.

Rather than recognition, FLIR uses “classification of human activity.” In most maritime first responder and commercial applications, we are primarily concerned with gaining insight into the presence and actions of humans onboard.

CLASSIFY HUMAN ACTIVITY

GOOD CONDITIONS
TYPICAL CONDITIONS
POOR CONDITIONS
The M232 is the most affordable FLIR pan/tilt marine thermal imaging system. The 320 × 240 resolution thermal sensor, combined with a 24-degree field of view lens is well suited for navigation and close-range detection of small vessels, markers, or obstructions. There are several options for controlling the camera, including select maritime electronic manufacturers, joystick control units, connecting to existing FLIR JCU’s, or via web application on supported devices. The system is future-ready with IP connectivity and control but can be adapted to support existing monitors with an analog video converter and a joystick control unit kit.
When the system is controlled using the Raymarine Axiom MFD, FLIR ClearCruise™ intelligent marine video analytics are enabled. ClearCruise technology automatically sends audible and visual alerts when objects appear on-screen. This is a powerful navigational aid for busy pilots and is only available on FLIR M232 models connected to a Raymarine Axiom display.

**M232 FEATURES**
- Pan/Tilt (M232)
- 320 × 240 thermal resolution
- Digital zoom
- Small, lightweight design
- IP video or optional analog connectivity
- Intelligent ClearCruise™ analytics with Axiom display

The MD-Series is an affordable, compact, fixed thermal-only night vision system that aids in navigation, collision avoidance, and onboard surveillance at night. It is simple to mount and integrate with existing electronics. Standard analog video can be easily displayed on almost any monitor on the vessel.

The MD is available in 640 × 480 or 320 × 240 resolution and can be mounted ball up or ball down. You can change color palettes, change the digital zoom, or adjust contrast settings from supported network-enabled multifunction displays, a PC, or the FLIR mobile app.

**FEATURES**
- 320 × 240 or 640 × 480 resolution
- Digital zoom
- Small, lightweight design
- Analog video integrates into most multifunction displays
- Supports ball up or down mounting
- Multiple control options

ClearCruise™ analytics provide visible and audible alerts when connected to an Axiom display.
Built on decades of experience building mission-proven thermal solutions, the FLIR M300 Series marine cameras are gyro-stabilized with full pan/tilt control. They are well suited for most close-to medium-range commercial and first responder missions.

The standard resolution M332 provides elite performance in close-range navigation and mission profiles, while the M364, M364C, and M364C LR are better suited for medium- to long-range applications. M300 Series is designed to integrate seamlessly with onboard navigation display and ONVIF compatible security systems.

All M300 Series cameras are equipped with an onboard Attitude Heading Reference System (AHRS), offering gyro-stabilized imagery, for when seas are rough.
FEATURES

• AHRS enhanced gyro-stabilization for steady images in rough seas
• Patented FLIR Color Thermal Vision blends thermal and visible imagery for enhanced awareness
• 360° pan and +/- 90° tilt control
• Rugged sealed enclosures with IP6 and Mil-Std 810-E certification
• Automatic window heaters for clearing ice
• Video over IP and Ethernet control for networking with MFDs and security systems
• Analog video and HD-SDI broadcast-quality video output

M300 Series cameras are available single or dual payload configurations. Dual payload models feature a 640 thermal camera core plus a high-definition lowlight visible camera with 30x optical zoom. Single payload thermal M300 series cameras are available with a 320 or 640 resolution thermal camera or a single high-definition lowlight visible camera with 30x optical zoom.

FEATURES

- AHRS enhanced gyro-stabilization for steady images in rough seas
- Patented FLIR Color Thermal Vision blends thermal and visible imagery for enhanced awareness
- 360° pan and +/- 90° tilt control
- Rugged sealed enclosures with IP6 and Mil-Std 810-E certification
- Automatic window heaters for clearing ice
- Video over IP and Ethernet control for networking with MFDs and security systems
- Analog video and HD-SDI broadcast-quality video output

LOW LIGHT VISIBLE CAMERA PROVIDES 36X OPTICAL AND 12X DIGITAL ZOOM DELIVERING EXCELLENT SURVEILLANCE STANDOFF AND THREAT DETECTION, AND VISIBLE FOOTAGE CAN BE USEFUL AS EVIDENCE FOR LAW ENFORCEMENT OR INSURANCE PURPOSES.

COLOR THERMAL VISION PROVIDES EASY IDENTIFICATION OF ILLUMINATED NAVIGATION AIDS.
M400/M400XR LONG-RANGE HIGH-PERFORMANCE MULTI-SENSOR SYSTEM

The M400 is a powerful long-range, stabilized multi-sensor maritime imaging system. With a 640 × 480 sensor and optical zoom lens the M400 can detect a 30’ outboard vessel at more than 3.5 nm in total darkness, and is packed with features for the most demanding first responder and commercial applications.

The M400 offers a continuous 4x optical and 4x digital zoom, enabling the system to detect vessels at nearly twice the range of the M364C LR. Active gyro-stabilization provides stable imagery and radar tracking can keep important targets in view at all times, reducing operator workload. The HD color and low light visible camera with 30x optical and 12x digital zoom provides maximum standoff for long-range surveillance operations. The M400 also features a powerful LED spotlight for target illumination and crew coordination.
FEATURES

• Long-range imaging performance
• High intensity LED spotlight illuminates targets of interest
• HD color and low light camera with 30x optical and 12x digital zoom, respectively
• Gyro-stabilization keeps image steady in rough water
• Rugged, proven, waterproof FLIR gimbal with automatic window heaters for ice management
• 360° pan and ± 90° tilt control for uninterrupted and continuous tracking
• Radar integration enables camera slew-to-cue and tracking capabilities
• Network-enabled for command, control, and information sharing
• Optional video tracker holds the camera on objects in the scene and reduces operator fatigue (XR Option)
• Optional high temperature mode includes special high-temperature calibration, on-screen temperature measurements, and a radiometric isotherm that displays the hottest area of the image in red.

When integrated with popular radar systems, the M400 supports camera slew-to-cue and radar target tracking. Three video streams allow you to integrate with legacy analog monitors, network video-enabled systems, or HD-SDI interfaces. The networking connection also supports remote command center sharing, recording, and control.

The M400XR model includes video target tracking, critical for extended surveillance operations. Also included in the XR option is the FLIR-exclusive firefighting mode, which draws on extensive experience in designing thermal systems for firefighting. FLIR cameras see through smoke, and the M400XR includes high temperature calibration, on-screen temperature measurements, and a radiometric isotherm that displays the hottest area of the image in red.

FIREFIGHTING MODE IDENTIFIES HOT SPOTS THROUGH DENSE SMOKE

4X OPTICAL ZOOM AND GYRO-STABILIZATION ENABLE LONG-RANGE VIEWING OF ONBOARD ACTIVITIES

HD color and low-light camera with 30x optical and 12x E-Zoom, respectively
The M500 is the most powerful commercially-available FLIR maritime camera. M500 uses the same high-sensitivity cooled mid-wave infrared sensor used in high-performance FLIR military systems and is twice as sensitive as the rest of the commercial lineup. When compared to the M400, the M500 mid-wave detector provides 2x the image sensitivity (quality) of other long-wave systems and delivers 35% better range performance.

Cooled mid-wave sensors perform better through fog and other atmospheric obscurants than long-wave systems. The M500 is well suited to agencies or organizations that need the maximum range performance and the best image quality available.
FEATURES

- High intensity LED spotlight can illuminate targets of interest
- HD color and low light camera offers 30x optical and 12x digital zoom, respectively, and delivers amazing standoff range
- Gyro-stabilization provides steady imagery in rough seas
- High-sensitivity mid-wave sensor delivers the maximum range performance and image quality available in a commercial system
- Rugged, proven, waterproof FLIR gimbal features automatic window heaters for ice management
- 360° pan and ± 90° tilt control provides uninterrupted and continuous tracking
- Video tracker holds the camera on objects in the scene and reduces operator fatigue
- Radar integration enables camera slew-to-cue and tracking capabilities
- Network enabled for command and control and information sharing
The Scion PTM is an IP67-rated thermal monocular designed for the rigors of marine patrol. High-performance handheld thermal imaging provides superior tactical awareness while conducting surveillance, searching for evidence, or responding to SAR missions. Capable of geotagged video recording and live video transmission, the Scion PTM can instantly stream encrypted thermal footage to the command center via wireless network.

With a fast, 60 Hz refresh rate and wide-array of lens options, the Scion PTM offers portable, on-demand surveillance to first responders.

**FEATURES**

- 640 x 512 thermal resolution
- IP67-rated
- Multiple lens options
- 4.5-hours of continuous operation
- Onboard video recording
- Wireless video streaming
- 2x, 4x, 8x digital zoom
- 1/4-20-tripod mount
### HANDHELD SPECIFICATIONS

**What’s In the Box:**
- Scion Thermal Monocular
- USB charging cable with universal AC adapter
- Custom video-out cable
- Wrist strap
- Molle bag
- Quick start guide

### USER INTERFACE

**Temperature Imaging Modes (Thermal Palettes):** White Hot; Black Hot; Iron Bow; Rainbow; Graded Fire; Lava

**Viewing Modes:** Scouting, Picture-in-Picture, Lock Span Mode

**Picture While Recording (PWR):** Yes

**Date/Time Stamp:** Yes

**Auto Power Off:** Yes

**Magnetic Compass:** Yes

### INTERFACING

**USB Type:** USB-C; Power In; Video Out; Video and Image File Transfer

### POWER

**Battery Type:** Up to 6x CR123A 3V Lithium Battery

**Battery Life:** Up to 4.5 hours at 20°C

### COMMUNICATIONS

**NFC (Near Field Communications):** Yes

**Bluetooth™:** Yes BLE 4.1+

**Wi-Fi:** Video Streaming

**GPS:** No

**FLIR TruWITNESS® Integration:** Yes

### PHYSICAL

**Weight:** Without Batteries: 452 g; With Batteries 572 g

**Size:** 227 x 76.8 x 60.5 mm (9 x 3 x 2.4 in)

**Color (Housing):** Black

**Mounting:** ¼-20 Tripod Mount

**Country of Origin:** USA
**MD-SERIES SPECIFICATIONS**

**WHAT’S IN THE BOX:**

**EVERY MD-SERIES THERMAL CAMERA SYSTEM INCLUDES:**

- Camera unit
- Camera base O-ring
- RJ-45 Ethernet cable, double shielded, low smoke zero halogen (LSZH) rated, 25 feet (7.7 meters)
- Coaxial video output cable, 25 feet (7.7 meters)
- 12V DC Power Over Ethernet (PoE) injector
- RJ45 weatherproof coupler
- Female-to-female F-type video connectors
- Stainless steel mounting hardware kit

---

M232 SPECIFICATIONS

WHAT'S IN THE BOX:
EVERY M232 THERMAL CAMERA INCLUDES:

- Camera unit
- Top down riser kit
- Thermal camera base-seal
- Right-angled RayNet to RayNet cable, 32 feet (10 meters)
- RayNet to RJ45 adapter cable, 4-inches (100mm)
- Right-angled 3-pin power cable, 32 feet (10 meters)
- Stainless steel mounting hardware kit

**MAIN THERMAL CAMERA**
- Field of View: 24° x 18°
- Video Refresh Rate: 9 Hz
- Focal Length: 19mm
- Focus: Fixed 12ft (3.6m) to infinity
- Optical Zoom: N/A
- Digital Zoom: 4x Continuous
- Detector Type: 320 x 240 VOx Microbolometer

**SYSTEM SPECIFICATIONS**
- Gyro Stabilized: No
- ClearCruise Analytics: Yes, with Raymarine Axiom
- Video Tracking: No
- Firefighter Mode: No
- Pan/Tilt Adjustment Range: Pan: 360° (continuous), Tilt: +110°, -90°
- Analogue Video Output: No
- Analogue Video Connector Types: N/A
- Network Video Output: Single H.264 Network Video Stream
- HD-SDI Lossless Video Output: No
- Power Requirements: 12 or 24 VDC
- Power Consumption: 15 W (typical), 18 W (max)
- Operating Temperature Range: -13°F to +131°F (-25°C to +55°C)
- Storage Temperature Range: -30°F to +158°F (-30°C to +70°C)
- Automatic Window Defrost: Standard at Power-Up
- Sand/Dust Ingress: Mil-Std-810E
- Water Ingress: IPX 6 (heavy seas, powerful jets of water)
- Shock: 15 g vertical, 9 g horizontal
- Vibration: IEC 60945, MIL-STD-810E
- Lightning Protection: Standard
- Salt Mist: IEC60095
- Weld: 100 knot (115.2 mph)
- EMI: IEC 60945

**PHYSICAL**
- Weight: 6.0 lb (2.7 kg) w/o top-down riser, 6.6 lb (3.0 kg) w/ top-down riser
- Size: 6.34° (dia. x base) x 9.07° (ht.) x 161.1 (dia.) x 229.3 (ht.) mm

# M400 Specifications

## WHAT'S IN THE BOX:

**EVERY M400 AND M400XR THERMAL CAMERA SYSTEM INCLUDES:**

- Camera unit
- FLIR Joystick Control Unit (JCU2) kit
- 5-Port PoE+ Ethernet Switch
- Power cable, right angle, 12 AWG, 3 meters
- Ethernet cable, right angle to RJ45, 1 meter
- RJ45 waterproof Ethernet coupler
- AV and serial cable, right angle, 1 meter
- HD-SDI cable, 1 meter
- HD-SDI Isolation Transformer
- Camera base O-ring and stainless steel mounting hardware kit

## M400 Specifications

### Thermal Camera

- **Field of View:** 24° to 6° (WFOV / 1.5° HFOV with e-zoom)
- **Video Refresh Rate:** <9 Hz or 30 Hz (NTSC and PAL)
- **Focal Length:** 26 mm (Widest) to 105 mm (Narrow)
- **Focus:** Controlled by JCU
- **Optical Zoom:** 4× Continuous
- **Digital Zoom:** 4× Continuous
- **Detector Type:** 640 x 512 VOx Microbolometer

### Visible Camera

- **Detector Type:** 1/2.8” CMOS
- **Lines of Resolution:** 1920 x 1080
- **Minimum Illumination:** 0.35 lux at F1.6, AGC On, 1/30s High Sensitivity Mode / 1.4 lux Normal Mode
- **Zoom:** 30x Optical Zoom
- **F-Stop:** 12x (360x total digital and optical zoom)
- **Focal Length:** 129 mm to 4.3 mm
- **Field of View:** Optical 63.7° x 35.8° WFOV to 2.3° x 1.29° NFOV

### Spotlights

- **Type, Lumens, Beamº:** LED, 580 Lumens, 5º Divergence Angle

### System Specifications

- **Gyro Stabilized:** Yes
- **Video Tracking:** No
- **Firefighter Mode:** Yes
- **Pan/Tilt Adjustment Range:** 360° Continuous Pan, ± 90° Tilt
- **Analogue Video Output:** NTSC or PAL, 30 Hz or <9 Hz
- **Analogue Video Connector Types:** F-type BNC, BNC-to-RCA adapter included for video out
- **Network Video Output:** Dual, Independent H.264 Network Video Streams
- **HD-SDI Lossless Video Output:** Yes
- **Power Requirements:** 12-24V DC
- **Power Consumption:** <50 W nominal; 130 W peak, 270 W 2/heaters
- **Operating Temperature Range:** -13°F to +131°F (-25°C to +55°C)
- **Storage Temperature Range:** -56° F to + 176°F (-50°C to +80°C)
- **Shock:** 15 g vertical, 9 g horizontal
- **Vibration:** IEC 60068, MIL-STD-810E
- **Environmental Protection:** Standard at Power Up
- **Salt Mist:** IEC 60068
- **Wind:** 100 knot (115.2 mph)
- **EMI:** IEC 60068
- **Physical:**
  - **Weight:** 28 lbs (12.7 kg)
  - **Size:** 10.75” (273.1 mm) x 15.65” (397.6 mm) - 18.05” (458.7mm) high with top down riser

Thermal camera shown with optional riser.
ABOUT FLIR

FLIR develops technologies that enhance perception and awareness. We bring innovative sensing solutions into daily life through our thermal imaging systems, visible-light imaging systems, locator systems, measurement and diagnostic systems, and advanced threat detection systems. Our products improve the way people interact with the world around them, enhance public safety and well-being, increase energy efficiency, and enable healthy and entertained communities.

We are a world leader in maritime thermal technology and have a long history of building reliable thermal imaging systems for demanding military and first responder missions. At FLIR, we develop and manufacture all the critical core technology inside our maritime cameras and provide an industry-leading warranty.

We understand the needs of our commercial and first responder customers, and our expert team can help you with technical information, grant writing assistance, or any other information you need to help you accomplish your goals. Thermal imaging is a powerful, lifesaving technology, and you can rely FLIR to be a trusted mission partner.
US EXPORT REGULATIONS
Equipment described herein is subject to US export regulations and may require a license prior to export. Diversion contrary to US law is prohibited. Imagery for illustration purposes only. Specifications are subject to change without notice. ©2019 FLIR Systems, Inc. All rights reserved

WARRANTY
Select FLIR maritime cameras are backed by a 2-year standard warranty and our commitment to world-class service and support. By registering your system at flir.com/support, the 2-year standard limited warranty is upgraded to a 3-year extended limited warranty for free. FLIR M500 cameras are backed by a 2-year/10,000 hour limited warranty. Visit flir.com/marine for complete warranty details
