All other trademarks, trade names or company names referenced herein are used for identification only and are the property of their respective owners.

1.2 Quality Assurance
The Quality Management System under which these products are developed and manufactured has been certified in accordance with the ISO 9001 standard.

FLIR Systems is committed to a policy of continuous development; therefore, we reserve the right to make changes and improvements on any of the products without prior notice.

1.3 Documentation
To access the latest manuals and notifications, go to the Download tab at: https://support.flir.com. It only takes a few minutes to register online. In the download area you will also find the latest releases of manuals for our other products, as well as manuals for our historical and obsolete products.

1.4 Disposal of Electronic Waste
As with most electronic products, this equipment must be disposed of in an environmentally friendly way, and in accordance with existing regulations for electronic waste. Please contact your FLIR Systems representative for more details.
2 Introduction

The CM94 is a high accuracy, rugged measurement instrument intended for the electrical utility and industrial maintenance professional for inspecting and troubleshooting high voltage/current electrical infrastructure systems and equipment. The low input impedance mode (LoZ) helps determine whether a measured voltage is ‘real’ or induced by load carrying cables running adjacent and parallel to the measurement target (ghost voltage).

Visit https://www.support.flir.com/prodreg to register your CM94 and to read the three-year warranty text.

Features

- Primary 6000 count and secondary 1999 count dual backlit displays
- Dual display of ACA + Hz and ACV + Hz
- Rated CAT IV 1000V / 2000A
- True RMS sensing
- VFD-V and VFD-Hz for use with variable speed drives
- Non-contact voltage detection (NCV)
- PEAK mode captures Peak Min and Peak Max current/voltage in 5 millisecond window
- Data Hold and Relative/Zero modes
- Auto Power OFF (APO) in 34 minutes
- LoZ mode to help detect ‘ghost’ voltages
- Type-K thermocouple temperature measurements
- Large jaws accommodate 2.2 in. (55 mm) cables
3.1 General Safety Information
This user manual contains information and warnings that must be followed for operating the instrument safely and maintaining the instrument in a safe operating condition. If the instrument is used in a manner not specified by the manufacturer, the protection provided by the instrument may be impaired.

The meter protection rating, against the users, is double insulation per UL/IEC/EN61010-1 Ed. 3.0, IEC/EN61010-2-033 Ed. 1.0, CAN/CSA C22.2 No. 61010-1 Ed. 3.0, IEC/EN61010-2-032 Ed. 3.0 & IEC/EN61010-031 Ed. 1.1: Measurement Category IV 1000V AC & DC.

Per IEC61010–1 OVERVOLTAGE CATEGORY

OVERVOLTAGE CATEGORY II (CAT II) is for equipment intended to be supplied from the building wiring. It applies both to plug-connected equipment and to PERMANENTLY CONNECTED EQUIPMENT.

OVERVOLTAGE CATEGORY III (CAT III) is for equipment intended to form part of a building wiring installation. Such equipment includes socket outlets, fuse panels, and some MAINS installation control equipment.

OVERVOLTAGE CATEGORY IV (CAT IV) is for equipment installed at or near the origin of the electrical supply to a building, between the building entrance and the main distribution board. Such equipment may include electricity tariff meters and primary over-current protection devices.

3.2 Safety Terms Used In This Manual
WARNING: Identifies conditions and actions that could result in serious injury or even death to the user.

CAUTION: Identifies conditions and actions that could cause damage or malfunction in the instrument.

3.3 Warning and Caution Statements

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>To reduce the risk of fire or electric shock, do not expose this product to rain or moisture. The meter is intended only for indoor use.</td>
</tr>
</tbody>
</table>
### WARNING

To avoid electrical shock hazard, observe the proper safety precautions when working with voltages above 60 VDC or 30 VAC rms. These voltage levels pose a potential shock hazard to the user. Before and after hazardous voltage measurements, test the voltage function on a known source such as line voltage to determine proper meter functioning.

### WARNING

Keep hands/fingers behind the hand/finger barriers (of the meter and the test leads) during measurement. Inspect test leads, connectors, and probes for damaged insulation or exposed metal before using the instrument. If any defects are found, replace them immediately. Use only the test leads provided with the equipment (or UL Listed probe assemblies rated CAT IV 1000V or better).

### WARNING

The accompanied test probe assembly meets UL/IEC/EN61010-031 Ed. 1.1 to the same meter ratings or better. IEC 61010-031 requires exposed conductive test probe tips to be \( \leq 4\text{mm} \) for CAT III & CAT IV ratings. Refer to the category markings on your probe assemblies as well as on the add-on accessories (detachable Caps or Alligator Clips, etc.), if any, for applicable rating changes.

### WARNING

This Clamp meter is designed for clamping around or removing from non-insulated, hazardous live conductors. Nonetheless, individual protective equipment must be used when hazardous live parts in the installation, where the measurement is to be made, could be accessible.

### WARNING

Remove test leads from the meter before taking clamp measurements.

### CAUTION

Disconnect the test leads from the test points before changing meter functions.

### CAUTION

Do not use the device for a procedure that it is not intended for. This can cause damage to the protection built into the instrument.
3.4 International Electrical Symbols

⚠️ Caution! Refer to the explanation in the user manual.

⚠️ Caution! Risk of electrical shock.

Ground.

Double/reinforced insulation.

Fuse.

AC (alternating current).

DC (direct current).

Application around, and removal from, hazardous live conductors is permitted.

3.5 CENELEC Directives

This instrument conforms to CENELEC Low-voltage directive 2014/35/EC, Electromagnetic compatibility directive 2014/30/EU and RoHS directive 2011/65/EU.

5. Battery status
6. Units of measure
7. 6000 count primary display
8. Relative mode
9. Low impedance mode
10. AC and DC measurement symbols
11. Continuity function
12. Low pass filter mode (VFD)
13. Peak MAX (up arrow) and Peak MIN (down arrow)
NOTE
Before operating the device, you must read, understand, and follow all instructions, dangers, warnings, cautions, and notes.

NOTE
When the meter is not in use, the function switch should be set to the OFF position.

NOTE
When connecting the probe leads to the device under test, connect the negative lead before connecting the positive lead. When removing the probe leads, remove the positive lead before removing the negative lead.

NOTE
Before and after hazardous voltage measurements, test the voltage function on a known source (such as line voltage) to determine proper meter functionality.

5.1 Powering the Meter
Set the function switch to any position to power the meter ON.

If the low battery voltage warning is displayed, or if the meter does not power ON, replace the batteries. See Section 6, Maintenance, for battery replacement details.

5.2 Auto Power OFF (APO)
The APO feature switches the meter OFF after approximately 34 minutes of inactivity. The meter will beep to alert you when it is about to power OFF, press the MODE button to extend the APO time. If the meter powers OFF, turn the rotary switch to the OFF position first and then to an operational position to switch back ON.

5.3 Automatic and Manual Ranges
The meter uses automatic ranging by default. To manually select a measurement range, short press the RANGE button to exit the Auto mode. Subsequent, short presses will step through the available ranges. Long press the RANGE button to return to the Auto Range mode. When the Auto Range mode is active, the Auto Range symbol is displayed.

Figure 5.1 Auto Range Display Icon
5.4 **Out-of-Range Alert**

If the input is out-of-range, *OL* is displayed. Please do not attempt to make measurements beyond the specified ranges of the meter.

5.5 **Display Hold Function**

After taking a measurement, short press the *HOLD* button to freeze a reading. Press the *HOLD* button again to return to normal operation. The *H* icon will appear when the display hold function is engaged.

5.6 **Display Backlight**

Long press the backlight button ✡ to turn ON the display backlighting. Long press again to switch the backlight OFF. The backlight switches OFF automatically after approximately 25 seconds to conserve battery energy.

5.7 **AC and DC Voltage Measurements**

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use caution when the measured voltage is greater than 30V DC or AC rms.</td>
</tr>
</tbody>
</table>
Figure 5.2 AC Voltage (left) and DC Voltage (right) Measurement Setups

1. Set the function switch to the AC Voltage \( \overline{V} \) or DC Voltage \( \overline{V} \) position.
2. Insert the black test lead into the negative (COM) terminal and the red test lead into the positive terminal.
3. Place the probe ends of the test leads in parallel to the part under test.
4. Read the Auto Range voltage measurement on the display.
5. To switch to Manual Range mode, short press the RANGE button. Subsequent short presses of the RANGE button will step through the available ranges. Long press the RANGE button to return to Auto Range mode.
6. Read the frequency (Hz) of an AC signal on the upper secondary display.
5.8  *LoZ Voltage Measurements*

**WARNING**

In *LoZ* mode, the input impedance increases quickly from the initial 2.5kΩ to a few hundred kΩ's on high voltage signals. Peak initial load current, while testing 1000 V AC for example, can be as high as 566 mA (1000 V x 1.414 / 2.5kΩ), decreasing to roughly 3.37 mA (1000 V x 1.414 / 420kΩ) within a fraction of a second. Do not use *LoZ* mode on circuits that could be damaged by such low input impedance. Use the standard high input impedance voltage modes to minimize loading on such circuits.

**CAUTION**

Use caution when the measured voltage is greater than 30V DC or AC rms.

*LoZ* Voltage measurements eliminate the affects of ‘ghost’ voltages. The procedure for taking *LoZ* Voltage measurements is essentially the same as for taking standard Voltage measurements, the only difference is that for *LoZ* Voltage measurements you select the *LoZ* rotary switch position and you must take into consideration the effect low impedance will have on circuitry that you test (read Warning statement above). Refer to the previous section for other Voltage measurement details.

When you turn the rotary dial to the *LoZ* position, the display will show ‘auto’ indicating that the CM94 will automatically detect the measured signal as AC or DC.

5.9  **Low Pass Filter (VFD) AC Voltage Measurements**

**CAUTION**

Use caution when the measured voltage is greater than 30V DC or AC rms.

Select the *VFD* mode using the rotary selector switch.

The *VFD* feature eliminates high frequency noise in AC voltage measurements by means of a low pass filter. The *VFD* mode is designed for variable frequency drive measurements. The *VFD* icon will appear on the display in this mode. The procedure for taking *VFD* Voltage measurements is identical to the procedure for taking standard Voltage measurements. Refer to the previous sections for Voltage measurement details.
5.10 Current Clamp Measurements

**WARNING**

Do not measure current on a circuit if the voltage increases to more than 1000 V. This can cause damage to the instrument and can cause injury to persons.

**WARNING**

Do not use the meter to measure current above the rated frequency. This may cause the magnetic circuits in the jaws to reach hazardous temperatures.

**WARNING**

Disconnect the test leads from the meter before taking Clamp measurements.

Clamp Measurement Considerations

- Press the jaw trigger to open the jaws and then clamp around the conductor(s) of only one pole of a circuit.
- Ensure that the jaws are completely closed. Enclosing conductor(s) of more than one pole of a circuit may result in differential current measurements.
- Align the conductor(s) to the jaws using the conductor align icons on the clamp jaws.
- Adjacent current-carrying devices such as transformers, motors and conductor wires may affect measurement accuracy.
Taking AC or DC Current Clamp Measurements

1. Set the function switch to the Ampere position $\overline{\text{A}}$.
2. Short press the $\textit{MODE}$ button to select AC or DC current mode.
3. For DC current mode, with no conductor in the clamp, long press the $\textit{ZERO}$ button to zero the display.
4. Press the trigger to open the clamp jaws and clamp around the conductor under test.
5. Read the Auto Range current measurement on the display.
6. To switch to Manual Range mode, short press the $\textit{RANGE}$ button. Subsequent short presses of the $\textit{RANGE}$ button will step through the available ranges. Long press the $\textit{RANGE}$ button to return to Auto Range mode.
7. Read the frequency (Hz) of an AC signal on the upper secondary display.

5.11 Resistance Measurements

$\textit{WARNING}$

Do not perform resistance tests before removing the power to resistors and other devices under test. Injury to persons can occur.
Figure 5.4 Resistance Measurement Setup.

1. Set the function switch to the Resistance Ω position.
2. If necessary, short press the MODE button to select the Resistance function.
3. Insert the black test lead into the negative (COM) terminal and the red test lead into the positive terminal.
4. Place the probe ends of the test leads in parallel to the part under test.
5. Read the resistance value on the display.
6. To switch to Manual Range mode, short press the RANGE button. Subsequent short presses of the RANGE button will step through the available ranges. Long press the RANGE button to return to Auto Range mode.

5.12 Continuity Measurements

WARNING

Do not perform continuity tests before removing power to the device under test. Injury to persons can occur.
Figure 5.5 Continuity Measurements. Note the CLOSED (0.00) and OPEN (OL) circuit examples.

1. Set the function switch to the Continuity position.
2. If necessary, short press the MODE button to select the Continuity function.
3. Insert the black test lead into the negative (COM) terminal and the red test lead into the positive terminal.
4. Place the probe ends of the test leads in parallel to the part under test.
5. If the measurement is <10 Ω, the meter will beep. If the measurement is >200 Ω, the meter will not beep. Between 10 Ω and 200 Ω, the meter will stop beeping at an unspecified point.

5.13 Diode Measurements

![Diode Measurement Diagram]

**WARNING**

Do not perform diode tests before removing power to the diode under test. Injury to persons can occur.
Diode Testing. Note the two test positions, forward and reverse bias.

1. Set the function switch to the Diode $\rightarrow$ position.
2. If necessary, short press the *MODE* button to select the Diode function.
3. Insert the black test lead into the negative (COM) terminal and the red test lead into the positive terminal.
4. Take two measurements, one forward biased and one reverse biased. This can be accomplished by, first, placing the probe ends of the test leads in parallel to the part under test in one direction and then taking a second measurement with the test leads reversed.
5. If the reading is between 0.40 V and 0.90 V in one direction and *OL* (overload) in the opposite direction, the component is good. If the measurement is 0V in both directions (shorted) or *OL* is displayed in both directions (open), the component is bad.
5.14 Capacitance Measurements

**WARNING**

Do not perform capacitance tests before removing power to the capacitor under test and discharging it through an appropriate resistance load. Injury to persons can occur.

![Capacitance Measurement Setup](image)

**Figure 5.7** Capacitance Measurement Setup.

1. Set the function switch to the Capacitance \( \rightarrow \) position.
2. If necessary, short press the *MODE* button to select the Capacitance function.
3. Insert the black test lead into the negative (COM) terminal and the red test lead into the positive terminal.
4. Place the probe ends of the test leads in parallel to the part under test.
5. Read the capacitance value on the display.
6. To switch to Manual Range mode, short press the *RANGE* button. Subsequent short presses of the *RANGE* button will step through the available ranges. Long press the *RANGE* button to return to Auto Range mode.
5.15 Type-K Thermocouple Measurements

**CAUTION**

The supplied thermocouple is rated for -4 ~ 482°F (-20 ~ 250°C) only, it is not rated for the entire specified temperature range of the meter.

![Thermocouple Temperature Measurements](image)

**Figure 5.8** Thermocouple Temperature Measurements.

1. Set the function switch to the Temperature position.
2. Insert the banana plug Type-K temperature probe into the meter’s input terminals observing correct polarity. A plug adapter with banana plug to Type-K socket (to adapt to other Type-K standard mini plug temperature probes) can be obtained optionally.

3. Touch the thermocouple probe tip to the surface of an object under test or hold the probe in air.

4. Read the temperature measurement on the display.

5. Use the MODE button to toggle °C and °F units of measure.

### 5.16 Non-Contact AC Voltage Detector

> **CAUTION**
>
> Use caution when the measured voltage is greater than 30V DC or AC rms.

![Figure 5.9](image) Non-Contact AC Voltage Detection (NCV).

1. Set the function switch to the AC Voltage position and remove the test leads from the CM94.

2. Short press the NCV button. The display will show the EF symbol (electromotive force).
3. The voltage detection antenna is located at the tip of the clamp jaws, just to the right of the jaw opening seam (with the meter facing you).

4. Hold the CM94 with hand/fingers behind the safety barrier and place the antenna near the source of potential voltage. Leave the jaws closed while using the voltage detector.

5. If voltage is present, the meter will beep and display dashes. The higher the voltage, the higher the beep rate and the higher the number of displayed dashes (1, 3, or 5 dashes).
6 Maintenance

6.1 Cleaning
With the CM94 OFF, wipe the meter housing with a damp cloth as needed. Do not use abrasives or solvents. Dry completely before use.

6.2 Battery Replacement
The battery compartment is located on the back of the CM94 secured by two screws. Open the compartment and replace the two ‘AA’ batteries observing correct polarity. Please secure the battery compartment before using the meter.

6.3 Meter Storage
If the meter is to be stored for an extended period, please remove the batteries and store separately.
# 7 Specifications

## 7.1 General Specifications

<table>
<thead>
<tr>
<th>Specification</th>
<th>Details</th>
</tr>
</thead>
</table>
| **Display**           | Primary: 6000 count backlit LCD  
                       Secondary: 1999 count backlit LCD |
| **Polarity**          | Automatic |
| **Update rate**       | 5 readings per second, nominal |
| **Operating temperature** | 14 ~ 122°F (−10 ~ 50°C) |
| **Relative humidity** | Maximum relative humidity 80% for temperature up to 88°F (31°C) decreasing linearly to 50% relative humidity at 122°F (50°C) |
| **Pollution**         | Degree 2 |
| **Storage temperature** | −4 ~ 140°F (-20 ~ 60°C) < 80% RH (with battery removed) |
| **Operating altitude** | 7000 ft. (2000 m) maximum |
| **Temperature coefficient** | Nominal 0.15 x (specified accuracy)/ °C @ (0 ~ 18°C [32 ~ 64.4°F] or 28 ~ 40°C [82.4 ~ 104°F]), or as otherwise specified |
| **Sensing**           | True RMS |
| **Transient protection** | 12 kV (1.2/50μs surge) |
| **Overload Protection** | Current Clamp measurements: 2000A DC/AC rms continuous  
                                   Voltage functions (input terminals): 1100V DC/AC rms  
                                   Other functions (input terminals): 1000V DC/AC rms |
| **Power supply**      | 1.5 V ‘AA’ battery x 2 |
| **Power consumption** | 14 mA for Current functions; 5.2 mA for other functions |
| **Low battery**       | < 2.4 V, approximately |
| **APO timer**         | After 34 minutes of inactivity, approximately |
| **APO consumption**   | 10μA, typical |
| **Dimensions**        | (LxWxH): 269 x 106 x 51 mm (10.6 x 4.2 x 2.0 in.) |

Input Impedance: 10MΩ, 50 pF nominal
7.5 **LoZ (AC Voltage) Specifications**

<table>
<thead>
<tr>
<th>Range and Resolution</th>
<th>Frequency</th>
<th>Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.000 V, 60.00 V, 600.0 V, &amp; 1000 V</td>
<td>50 Hz ~ 60 Hz</td>
<td>± (1.5% + 5 digits)</td>
</tr>
</tbody>
</table>

*LoZ ACV threshold: > 1.5V AC, and < −1.5V AC*

Input impedance: Initially approx. 2.5k ohms, 600pF, nominal; Impedance increases within a fraction of a second as voltage increases above 50V (typical). Final impedance vs. displayed voltage: 10k ohms @100V, 60k ohms @300V, 200k ohms @600V, 420k ohms @1000V (typical)

7.6 **VFD (low pass filter) AC Voltage Specifications**

<table>
<thead>
<tr>
<th>Range and Resolution</th>
<th>Frequency</th>
<th>Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.000 V, 60.00 V, 600.0 V, &amp; 1000 V</td>
<td>10 Hz ~ 20 Hz</td>
<td>± (4.0% + 80 digits)</td>
</tr>
<tr>
<td></td>
<td>20 Hz ~ 200 Hz</td>
<td>± (2.0% + 60 digits)</td>
</tr>
<tr>
<td></td>
<td>200 Hz ~ 400 Hz²</td>
<td>± (7.0% + 80 digits)</td>
</tr>
</tbody>
</table>

1. Not specified for fundamental frequency > 400 Hz
2. Accuracy linearly decreases from 2% + 60 digits @ 200 Hz to 7% + 80 digits @ 400 Hz

7.7 **PEAK HOLD Capture Mode Specifications**

Accuracy: Specified accuracy plus 250 digits for changes > 5ms in duration.

7.8 **Resistance Specifications**

<table>
<thead>
<tr>
<th>Range and Resolution</th>
<th>Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>600.0 Ω, 6.000 kΩ, 60.00 kΩ</td>
<td>± (0.5% + 5 digits)</td>
</tr>
<tr>
<td>600.0 kΩ</td>
<td>± (0.8% + 5 digits)</td>
</tr>
<tr>
<td>6.000 MΩ</td>
<td>± (1.2% + 5 digits)</td>
</tr>
<tr>
<td>40.00 MΩ</td>
<td>± (2.3% + 5 digits)</td>
</tr>
</tbody>
</table>

Open Circuit Voltage: 0.45 V DC, typical

7.9 **Continuity Specifications**

Audible threshold: 10Ω ~ 200Ω.

Beeper response time: 32ms, approx.

Beeper frequency: 2k Hz
### 7.10 Capacitance Specifications

<table>
<thead>
<tr>
<th>Range and Resolution</th>
<th>Accuracy¹</th>
</tr>
</thead>
<tbody>
<tr>
<td>60.00 nF, 600.0 nF, 6.000 μF</td>
<td>± (2.0% + 5 digits)</td>
</tr>
<tr>
<td>60.00 μF, 600.0 μF</td>
<td>± (3.5% + 5 digits)²</td>
</tr>
<tr>
<td>2000 μF</td>
<td>± (4.0% + 5 digits)³</td>
</tr>
</tbody>
</table>

1. Accuracy specified with film capacitor or better
2. Temperature coefficient: 0.25 x (specified accuracy) / °C [1.8°F] @ (0 ~ 18°C [32 ~ 64.4°F] or 28 ~ 40°C [82.4 ~ 104°F])
3. Temperature coefficient: 0.25 x (specified accuracy) / °C [1.8°F] @ (0 ~ 18°C [32 ~ 64.4°F] or 28 ~ 40°C [82.4 ~ 104°F])

### 7.11 Diode Specifications

<table>
<thead>
<tr>
<th>Range and Resolution</th>
<th>Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.000 V</td>
<td>± (1.0 + 3 digits)</td>
</tr>
</tbody>
</table>

Test Current: 0.56 mA, typical

Open Circuit Voltage: < 1.8 V DC typical

### 7.12 DC Current Specifications (Clamp)

<table>
<thead>
<tr>
<th>Range and Resolution</th>
<th>Accuracy¹ ²</th>
</tr>
</thead>
<tbody>
<tr>
<td>200.0 A</td>
<td>± (2.0% + 5 digits)</td>
</tr>
<tr>
<td>0 ~ 500 A</td>
<td>± (2.0% + 5 digits)</td>
</tr>
<tr>
<td>500 ~ 2000 A</td>
<td>± (3.0% + 5 digits)</td>
</tr>
</tbody>
</table>

1. Induced error from adjacent current-carrying conductors: < 0.1 A/A
2. Accuracy specified with DC Zero (Relative) mode applied to offset non-zero residual readings

### 7.13 AC Current Specifications (Clamp)

<table>
<thead>
<tr>
<th>Range and Resolution</th>
<th>Frequency</th>
<th>Accuracy¹</th>
</tr>
</thead>
<tbody>
<tr>
<td>200.0 A</td>
<td>50 ~ 60 Hz</td>

<tr>
<td>1000 ~ 2000 A</td>
<td></td>
<td>± (3.5% + 5 digits)</td>
</tr>
<tr>
<td>200.0 A</td>
<td></td>
<td>Unspecified</td>
</tr>
</tbody>
</table>

1. Induced error from adjacent current-carrying conductors: < 0.1 A/A

True RMS crest factor < 1.4 : 1 at full scale and < 2.8 : 1 at half scale.

7.14 Hz Line Level Frequency Specifications

<table>
<thead>
<tr>
<th>Range/Function</th>
<th>Sensitivity (sine RMS)</th>
<th>Frequency Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 V</td>
<td>2 V</td>
<td>40 Hz ~ 1999 Hz</td>
</tr>
<tr>
<td>60 V</td>
<td>20 V</td>
<td></td>
</tr>
<tr>
<td>600 V</td>
<td>100 V</td>
<td>10 Hz ~ 400 Hz</td>
</tr>
<tr>
<td>1000 V</td>
<td>600 V</td>
<td></td>
</tr>
<tr>
<td>200 A</td>
<td>10 A</td>
<td></td>
</tr>
<tr>
<td>2000 A</td>
<td>40 A</td>
<td></td>
</tr>
<tr>
<td>6 V (VFD)¹</td>
<td>1 V ~ 2 V</td>
<td></td>
</tr>
<tr>
<td>60 V (VFD)²</td>
<td>6 V ~ 20 V</td>
<td>10 Hz ~ 400 Hz</td>
</tr>
<tr>
<td>600 V (VFD)³</td>
<td>60 V ~ 200 V</td>
<td></td>
</tr>
</tbody>
</table>

1. VFD sensitivity linearly decreases from 10% F.S. @ 200Hz to 40% F.S. @ 400Hz
2. VFD sensitivity linearly decreases from 10% F.S. @ 200Hz to 40% F.S. @ 400Hz
3. VFD sensitivity linearly decreases from 10% F.S. @ 200Hz to 40% F.S. @ 400Hz

Accuracy: ± (0.1% + 4 digits)

7.15 Temperature Specifications

<table>
<thead>
<tr>
<th>Range¹</th>
<th>Accuracy²</th>
</tr>
</thead>
<tbody>
<tr>
<td>-50 ~ 1000°C</td>
<td>± (0.3% + 4 digits)</td>
</tr>
<tr>
<td>-58 ~ 1832°F</td>
<td>± (0.3% + 6 digits)</td>
</tr>
</tbody>
</table>

1. Supplied thermocouple is rated for -4 ~ 482°F (-20 ~ 250°C) only, and therefore not rated for the entire specified temperature range of the meter.
2. Assumes meter interior and ambient temperature have reached stable isothermal stage for correct junction voltage compensation. Does not include error introduced by thermocouple probe.
7.16 Non-Contact AC Voltage Detector (NCV)

<table>
